1. Must be free of ryegrass, orchardgrass, timothy, bentgrass, big bluegrass, poa trivialis, smooth bromegrass, reed canary grass, tall fescue, and clover. (When the base sample is one of these kinds, the species will not be considered a contaminant; i.e. ryegrass in ryegrass)
2. Certification fluorescence levels and appropriate calculation will be applied when determining levels of other crop.
3. Maximum other varieties of Kentucky bluegrass allowed is 2%; maximum allowed Canada bluegrass is 0.02%
4. A 500-seed count will be used to determine other species of Agrostis.
5. Must be free of dock – Rumex spp., chickweed – Cerastium spp., and Stelloria media, crabgrass – Digitaria spp., plantain – Plantago spp., black medic – Medicago lupulina, annual bluegrass – Poa annua, velvetgrass – Holcus spp., Downy Brome – Bromus tectorum, and other “All-state” noxious weed seeds, except Hawaii.
