

perennial ryegrass

# SILVER SUN

## THE FOUNDATION OF EXCELLENCE

A research first approach of perfecting turfgrass performance.

### Variety information

#### Description:

Silver Sun is a top performing perennial ryegrass developed by Pure-Seed Testing, Inc. and was selected for its dark green color, superior turf performance and great resistance to gray leaf spot. Silver Sun has good heat and drought tolerance. These attributes make Silver Sun a perfect choice for turfgrass professionals everywhere.

#### Applications:

Silver Sun is an excellent option for permanent turf use as well as overseeding of dormant Bermudagrass for golf courses and sports fields. Silver Sun is second to none when it comes to genetic color and turf quality in perennial ryegrass. Premium turf quality and disease resistance allows Silver Sun to excel by itself, or as a component to a blend or mix. Silver Sun is an excellent choice for high traffic sports fields, golf course overseeding, and sod farms. Silver Sun can handle mowing heights from .25" to 2.5" (1.27-10 cm) with good turf quality. It is well suited in soils with pH of 5.5-8.0.

#### Geographical Adaption:

Silver Sun does well throughout the cool-season turfgrass zones and into the northern areas of the transition zone. It also does well as an overseeding component of dormant bermudagrass in the south. Seeding rates for home and landscape use range from 7-10 lbs./1,000 sq. ft (294-490 kg/ha). For athletic fields, golf course overseeding, and sod farms a range of 450-650 lbs./acre (204-295 kg/ha) is adequate. Silver Sun germinates within 7 days under normal weather and application conditions.

### PRODUCT FEATURES

Heat Tolerance	● ● ● ● ●
Color & Density	● ● ● ● ●
Traffic Tolerance	● ● ● ● ●
Gray Leaf Spot	● ● ● ● ●
Drought Tolerance	● ● ● ● ●
Seeding Rate	7-10 lbs /1000sq. ft (294-490 kg/ha)
