

## Top Gun

### Adaptation:

Top Gun is a very durable forage grass with a wide adaption to environments. It is drought tolerant and has low nutrient requirements.

### Growth Habitat:

Teff is a self-pollinated, warm season annual grass. Due to its fast growth, high yield and high quality it can be harvested multiple times during the growing season

### Establishment and Management:

Top Gun is a warm season annual teff grass that requires a frost free growing season. Soil temperatures should be at least 65 degrees F and warming. When planted at the right depth and temperatures, Teff usually emerges in 4 to 5 days.

### Uses

#### Silage/Hay/Grazing

Top Gun is a highly versatile forage grass and can be used for grazing, silage, or hay.

### Plant Characteristics:

**Fast Growing**

**High Yield**

**Drought Tolerant**

**Palatable**

**Summer Production**

**Wide Adaptation**

**Low Nutrient Requirements**

### Usage:

Cutting

Grazing

Seeding rate: 8-10 lbs per acre

Seeding depth: 1/8 to 1/4in deep (firm seed bed needed)
