

Why TWCA

The Turfgrass Water Conservation Alliance (TWCA) is committed to improving plant material that leads to water conservation. The organization's science-based approach relies on 3rd party peer review data to qualify only the turfgrasses that demonstrate a statistically significant water saving potential.

Why the Consumer Will Care

Water scarcity is a global issue that everyone needs to do their part to improve. Consumers are aware of this issue making decisions to purchase grasses that use significantly less water.

40% Less Water

TWCA qualified cultivars can use up to 40% less water while still maintaining a green and healthy surface for people to enjoy.

Qualified Brands

Pure Seed has qualified Brands in the following species:

- **SUNRYE™** Perennial Ryegrass
