

ENCHANTMENT

THE FOUNDATION OF EXCELLENCE

A research first approach of perfecting turfgrass performance.

Variety information

Description:

Enchantment chewing's fescue tested as exp. PST-4CH6 is the latest release of chewing's fescue out of the Pure-Seed Testing research program. Enchantment is a medium green variety with good overall tolerance to drought conditions. It also displays good tolerance to medium levels (4-8 oz./acre) of glyphosate applications. Enchantment was a top performer for resistance to melting out in turf quality ratings, for entries in a fine fescue turf trial located near Hubbard, OR. Enchantment has reduced vertical growth compared to other fine fescues during the grow-in period for reduced maintenance costs.

Applications:

Enchantment chewing's fescue is an excellent choice for use in areas where low maintenance and pleasing green color is desired. It is also a popular choice for slopes and banks for erosion control. Golf courses frequently use chewing's fescues on roughs for that wavy, blowing in the breeze look when it's left un-mowed. Enchantment is an excellent choice as a component for blending with perennial ryegrass, and Kentucky bluegrass for parks and home lawns.

Geographical Adaption:

Enchantment is best adapted from the transition zones to the cooler climates throughout the northern hemisphere. It can also be utilized as a component with perennial ryegrass for southern overseeding of dormant bermudagrass. Enchantment will establish and perform well when seeded at 2-4 lbs./1,000 sq. ft (170 kg./ha). for new installations. Under normal conditions Enchantment should fully establish in 14-21 days. First mowing should occur at 2"-3" (5-7 cm.)

PRODUCT FEATURES

Summer Patch	● ● ● ● ●
Mowing Frequency	● ● ● ● ●
Drought Tolerance	● ● ● ● ●
Glyphosate Tolerance	● ● ● ● ●
Turf Density	● ● ● ● ●
Seeding Rate	2-4 lbs /1000sq. ft (170 kg/ha)
